1.7%
Surveillance Truncation
Transition: 151/408 = 37.0%
(257 stays develop sepsis after h36)
Pretreatment Actionability
Transition: 150/151 = 99.3%
(Alert opportunity precedes antibiotics)
Operational Alert Budget
Transition: 7/150 = 4.7%
(BiMamba SSM at 10 emitted episodes/100 pt-days)
1. Total Incident Sepsis
100.0%
[N=408 / 408]
2. Surveillance Covered
37.0%
[N=151 / 408]
3. Pretreatment Eligible
36.8%
[N=150 / 408]
4. Timely Detected
1.7%
[N=7 / 408]
