A. Operational Clocks & Actionable Decision Boundary

Mathematical Formulation:

- Canonical Risk Set: $\mathcal{R}_{canonical} = \{t : 0 < T_{S3} - t \leq 6h\}$
- Pretreatment Risk Set: $\mathcal{R}_0 = \{t \in \mathcal{R}_{canonical} : t \leq T_{treatment}\}$
- Actionable Buffer ($\delta = 2h$): $\mathcal{R}_2 = \{t \in \mathcal{R}_{canonical} : t + 2h \leq T_{treatment}\}$

B. Population Opportunity Attrition
